

Module-4

- What are the main factors that can affect PPC bidding?

The main factors that can affect **PPC (Pay-Per-Click) bidding** are:

1. **Competition** – More advertisers bidding on the same keyword increases the bid cost.
2. **Keyword Quality Score** – Higher relevance and better ad performance can lower your bid.
3. **Ad Relevance** – Ads closely matching the keyword and user intent perform better.
4. **Landing Page Experience** – Fast, relevant, and user-friendly pages reduce costs.
5. **Bid Strategy** – Manual or automated strategies impact how bids are adjusted.
6. **Target Location & Device** – Bids vary based on geography, device, and audience.
7. **Time & Seasonality** – Peak times and seasonal demand raise bidding costs.

- How does a search engine calculate actual CPC?

A search engine calculates **Actual CPC (Cost-Per-Click)** using this formula:

$$\text{Actual CPC} = (\text{Ad Rank of the competitor below you} \div \text{Your Quality Score}) + ₹0.01$$

Explanation:

- **Ad Rank** depends on your bid amount, Quality Score, and ad extensions.
- You **don't pay your maximum bid**; you pay just enough to beat the advertiser below you.
- A **higher Quality Score** helps you pay a lower CPC while maintaining a better ad position.

So, better ad quality and relevance can significantly reduce your actual CPC.

- What is a quality score and why it is important for Ads?

Quality Score is a metric used by search engines (like Google Ads) to measure how **relevant and useful** your ad is to users.

Quality Score is based on:

1. **Expected Click-Through Rate (CTR)**
2. **Ad Relevance**
3. **Landing Page Experience**

Why Quality Score is important:

- **Lowers CPC** – Higher Quality Score means you pay less per click
- **Improves Ad Rank** – Helps ads appear in higher positions
- **Increases ROI** – Better performance with less budget
- **Boosts Ad Visibility** – Ads show more frequently

In short, a **high Quality Score = better ads, lower cost, and higher results.**
